## Marine Rescue Ladder

The Marine Rescue Ladder is based upon the same high specifications as the Clow Euroglas Ladder.

With an all glassfibre construction, the ladder's box section stiles are constructed from glass reinforced plastic.

The rungs are manufactured from serrated non-slip, resin matrix glass reinforced tubes which are fully bonded into specially designed box section stiles.

The Marine Rescue Ladder provides a structure which is totally electrically insulated and has a high degree of weather resistance. It is completely insulated and impervious to salt water.

The Marine Rescue Ladder has been designed specifically to handle the extremes of being permanently submerged in sea water.

This ladder is ideal for use in marinas and harbours or any location where safe and secure access is required from ship to shore.

Lengths available are 5', 6' and 7'.
