Wakü Ladders to European Standard EN131

The All-In-One Wakü Telescopic Ladder is an extremely versatile ladder system featuring telescopic side rails, strong multiple disc aluminium hinges and high quality steel bolts.

Available in four model sizes the Waku Ladder is manufactured to European Standard DIN EN131 and is a professional quality ladder recognised for its quality, strength and versatility.

Featuring strong rubber feet, square non-slip rungs, automatic spring loaded locking devices, strong steel hinging system and wide legs at the base and the top this ladder is extremely stable and safe to use. An additional highlight of this ladder is its compact size - it folds down to one quarter of its overall length and can be easily carried and stored by one person.

With its adjustable telescopic legs the Wakü ladder can replace a complete range of different height stepladders. Securely locked by four spring bolts the ladder height can be safely adjusted rung by rung, allowing the user to select the optimum height for the job in hand.

Used as a staircase ladder the Wakü Ladder can be telescoped upwards so that the height of the individual ladder sides can be independently adjusted. This feature makes the Waku Ladder ideal for use on uneven ground such as slopes and staircases where the wide section legs provide additional safety and stability.

The automatic safety hinge on the Wakü ladder allows the ladder to be opened up into a straight lean-to extension ladder. In this configuration the ladder can be extended rung by rung to almost four times its original size

The Wakü ladder sections can also be separated to create a pair of free-standing trestles. Please note this trestle configuration is not intended for heavy duty use and should only be considered for light duty work.

The Wakü Telescopic Ladder is also available with a number of optional accessories including Hook-On-Platforms, Ladder Extension Legs and Wall Stand Off Attachments.
