

## Clow Vehicle Access Ladder

The Working At Height Regulations (2005) require that for any work to be undertaken at height, consideration should be given to safe access and egress.

The Clow Vehicle Access Ladder is designed to provide a safe and secure access point to and from a flat bed vehicle.

Designed for safety and ease of use, the Clow Vehicle Access Ladder is supplied complete with handrail post and location bars to ensure a secure access point.

Twin adjustable webbing straps secure the ladder to the vehicle and two sliding location bars set the correct ladder angle and height. The Clow Vehicle Access Ladder provides a safe, secure and cost effective solution to access on a flat vehicle deck.

Clow Vehicle Access Ladder (CVAL)	
Length (mm)	1500mm (1.5m)
Overall Length – with handrail (mm)	2600mm (2.6m)
Overall Width (mm)	360mm
Maximum Deck Height (mm)	1400mm (1.4m)
Weight	11kg

Integrated Location Bars set the correct ladder angle and secure the ladder to the deck via adjustable quick release webbing straps.

The Handrail Post is secured with a quick release bolt, fitted with a captured plastic handle for ease of use.

Heavy Duty Hooks, fitted to the existing vehicle deck steelwork, ensure the ladder is stable and secure at all times.
