

## Fibreglass Folscaf Platform

The Fibreglass Folscaf has been designed to accommodate the requirement for a lightweight folding platform, which also must provide insulation whilst working on electrical installations. Supplied with a one-piece folding bottom section which ensures the base of the platform can be positioned in 500mm increments up to 1860mm on the standard unit. A guardrail section with toeboards, and an extension section are available to provide a maximum platform height of 2860mm. To allow safe access to the platform one side frame has rungs at 250mm centres; the rungs are serrated giving an anti-slip surface.
